EDUCATION

B.S. in Computer Science, Brigham Young University - Idaho

Apr 2027 (Expected)

- GPA: 3.98

Associate in Business Statistics, Brigham Young University

Apr 2024

- GPA: 4.0

EXPERIENCE

Software Developer, BYU

May 2024 - Present

- Architected a scalable data-patching workflow integrating Genesys, iPaaS, and JavaScript appending vital metadata to 2,000+ daily tickets, executing complex Python analysis enabling advanced linear regression modeling.
- Delivered 350+ system integrations updating 30+ Power BI dashboards across 15+ departments, assisting 100,000+ users driving data-informed strategic decisions saving \$110K+ in annual operational expenditures.
- Formulated a secure PII-cleaning model applying Python, Microsoft Presidio, and Ollama validation, reliably sanitizing Genesys transcripts feeding Copilot auto-ticketing automated pipelines within TeamDynamix.
- Constructed a serverless React and TypeScript knowledge base utilizing GitHub Pages and Octokit APIs, centralizing critical internal technical documentation circumventing external database architectural dependencies.
- Accelerated survey delivery speeds by 93%, re-engineering 21 disparate backend workflows using TypeScript.

Co-Founder, Daily Disciple

May 2025 - Present

- Spearheaded a comprehensive productivity platform reaching 18,000+ active users, securing strategic business partnerships with Fortune 500 companies modernizing widespread enterprise procedural workflows.
- Pitched comprehensive business models securing capital funding, subsequently hiring a dedicated engineering team driving rapid Spanish-market expansion accelerating global application user acquisition.
- Engineered the foundational core infrastructure utilizing React, Expo, and Node.js, establishing robust real-time tracking features surging task completion rates 76% and mitigating overall user churn 32%.

CS Teaching Assistant, Brigham Young University - Idaho

May 2026 - Present

- Validated cloud-native AWS, Docker, and Kubernetes architectures, enforcing strict serverless scaling compliance, optimizing computational resource allocation, and establishing industry-standard deployment practices.
- Mentored 100+ students navigating Cloud Development and WDD 131 Dynamic Web Fundamentals, leveraging interactive multi-level teaching strategies maximizing overall frontend coding proficiency and core understanding.
- Facilitated modern CI/CD best practices, streamlining submission workflows across 1,000+ automated assignments.

Software Engineer, FamilySearch

Apr 2025 - Oct 2025

- Orchestrated 100+ automated releases via C# and Azure Functions ensuring rigorous platform reliability, mitigating severe deployment risks and consistently achieving zero critical downtime for 13.7M global end-users.
- Transitioned outdated manual testing protocols to automated continuous integration pipelines across C#, Java, and Python architectures, successfully expanding test coverage 97% eliminating operational bottlenecks.
- Refactored 10,000+ lines of critical legacy code, boosting system performance 36% via optimized Azure test suites.

Researcher, CCS Global Tech

Sep 2023 - May 2024

- Optimized complex enterprise data pipelines utilizing R, SQL, Snowflake, and Python, effectively integrating 87% of required predictive analytics models driving data-informed corporate decision-making.
- Overhauled Zoho CRM UI/UX architectures elevating internal staff productivity 34% across 5,000+ client records through heavily enhanced data accessibility, intuitive dashboard visualizations, and streamlined navigation.

IT Tier 3 Technician, Verizon

Feb 2022 - Sep 2023

- Directed Tier 3 IT operations managing a dedicated cross-functional technical team simplifying internal operational delivery and substantially elevating baseline consumer trouble ticket resolution metrics.
- Programmed a custom C#/ASP.NET integration tool amplifying internal team developmental output 78% drastically reducing overall project turnaround times 34% across massive regional telecommunication deployments.
- Fortified core enterprise security architectures linking MTAS/MSAT with Salesforce, generating \$148K in savings.

PROJECTS

Phronesis - (Mobile App & AI/ML)

Oct 2025

- Built a React Native and Firebase application processing 1,000+ user reflections modernizing mental health tracking
- Integrated AssemblyAI for real-time sentiment analysis, processing active inputs under 5 seconds reliably delivering daily AI-driven insights supporting 100+ users demonstrating 41% accuracy correlation.

Secure File Sync - (Systems Programming & Security)

Nov 2025

- Secured 6,000+ sensitive external files utilizing Rust and AES-256-GCM, enforcing strict encryption, background monitoring, and robust cryptographic key management completely preventing unauthorized data access.
- Configured highly optimized low-latency CLI tools automating rapid decryption and file tracking, drastically reducing required manual input and administrative overhead 87% maintaining strict data integrity.
