EDUCATION

Computer Science, Brigham Young University - Idaho

Sep 2027

- GPA: 3.98

Business Statistics, Brigham Young University

Apr 2024

- GPA: 4.0

EXPERIENCE

Software Developer, BYU-I

May 2024 - Present

- Automated Financial Aid scholarship processing via iPaaS, and JavaScript, eliminating **98%** of manual applicant review and saving **\$110K+** in annual operational costs across university financial aid operations.
- Built a TypeScript and React observability platform monitoring **600+** iPaaS, Programs, and TeamDynamix integrations on 5-minute cycles, auto-creating incident alert tickets for systems operators.
- Architected metadata pipelines enriching **2,000+** daily Genesys tickets via iPaaS and JavaScript workflows, enabling Python regression analysis driving data-informed staffing decisions and service quality improvements.
- Engineered Presidio and Ollama PII sanitization on Genesys transcripts for secure Copilot auto-ticketing.

CS Teaching Assistant, BYU-I

May 2026 - Sep 2026

- Validated cloud-native AWS, Docker, and Kubernetes architectures, enforcing strict serverless scaling compliance, optimizing computational resource allocation, and establishing industry-standard deployment practices.
- Mentored **100+** students navigating Cloud Development and WDD 131 Dynamic Web Fundamentals, leveraging interactive multi-level teaching strategies maximizing overall frontend coding proficiency and core understanding.
- Facilitated modern CI/CD best practices, streamlining submission workflows across **1,000+** automated assignments.

Software Engineer, FamilySearch

Apr 2025 - Oct 2025

- Orchestrated **100+** automated releases via C# and Azure Functions ensuring rigorous platform reliability, mitigating severe deployment risks and consistently achieving zero critical downtime for **13.7M** global end-users.
- Transitioned outdated manual testing protocols to automated continuous integration pipelines across C#, Java, and Python architectures, successfully expanding test coverage **97%** eliminating operational bottlenecks.
- Refactored **10,000+** lines of critical legacy code, boosting system performance **36%** via optimized Azure test suites.

Researcher, CCS Global Tech

Sep 2023 - May 2024

- Optimized complex enterprise data pipelines utilizing R, SQL, Snowflake, and Python, effectively integrating **87%** of required predictive analytics models driving data-informed corporate decision-making.
- Overhauled Zoho CRM UI/UX architectures elevating internal staff productivity **34%** across **5,000+** client records through heavily enhanced data accessibility, intuitive dashboard visualizations, and streamlined navigation.

L3 Technician, Verizon

Feb 2022 - Sep 2023

- Directed Tier 3 IT operations managing a dedicated cross-functional technical team simplifying internal operational delivery and substantially elevating baseline consumer trouble ticket resolution metrics.
- Programmed a custom C#/ASP.NET integration tool amplifying internal team developmental output **78%** drastically reducing overall project turnaround times **34%** across massive regional telecommunication deployments.
- Fortified core enterprise security architectures linking MTAS/MSAT with Salesforce, generating **\$148K** in savings.

PROJECTS

Secure File Sync - (Systems Programming & Security)

Nov 2025

- Secured **6,000+** sensitive external files utilizing Rust and AES-256-GCM, enforcing strict encryption, background monitoring, and robust cryptographic key management completely preventing unauthorized data access.
- Configured highly optimized low-latency CLI tools automating rapid decryption and file tracking, drastically reducing required manual input and administrative overhead **87%** maintaining strict data integrity.

Phronesis - (Mobile App & AI/ML)

Oct 2025

- Built a React Native and Firebase application processing **1,000+** user reflections for mental health tracking.
- Integrated AssemblyAI for real-time sentiment analysis, processing active inputs under 5 seconds reliably delivering daily AI-driven insights supporting **100+** users demonstrating **41%** accuracy correlation.

KB Connector Tool - (Data Integration & Automation)

Feb 2025

- Built a TypeScript and Node.js TDX API integration syncing knowledge base articles and Genesys data, cutting manual processing **88%**, doubling data precision, and powering **5,000+** monthly AI interactions.
- Engineered activation modules transforming operational knowledge delivery across enterprise center workflows.

Centurion - (Data Analytics & AI/ML)

Apr 2024

- Led 7 workshops on Python, R, Tableau, and Power BI for **80+** participants, uncovering **\$11K** in annual operational inefficiencies through predictive modeling and dashboard design across university analytics initiatives.
- Applied AI/ML optimization models across datasets, enabling data-informed allocation through predictive analytics.
